

ARD-NANO V4

ATmega 328PB Microcontroller board

The ARD-NanoV4 is a particularly small microcontroller and, due to the pin header leading out at the bottom, has been specially developed for working with plug-in boards.

The integrated USB Type-C interface can be used to supply both the circuit and the board with power, as well as to transfer programs to the microcontroller.

The NanoV4 is fully compatible with the Arduino Nano V3.
