## Product description:

This type of compact constant current power supply with 110-277Vac input voltage has very high efficiency and low power loss.

Designed with high power factor and low output ripple, it can be used either built-in or independently. The output current can be set by the DIP switch, and the output current can be switched every 50mA from 150mA to 500mA.

It conforms to SELV standard and the built-in protection circuit will shut down the converter in case of such faults as: open circuit, short circuit, over load, over temperature. The power supply will restart automatically after fault correction.

## Characteristics:

- Multipower driver supplied with dip-switch for the selection of the output current.
- Class II protection against electric shock for direct or indirect contact
- Driver for built-in or independent use.
- It can be used for lighting equipment in protection class I and II
- Active Power Factor Corrector.
- SELV output(<60V)
- Free flicker design
- Open circuit,short circuit,over load and over temperature protection
- Auto restart after fault conditions removal
- Warranty: 5 years

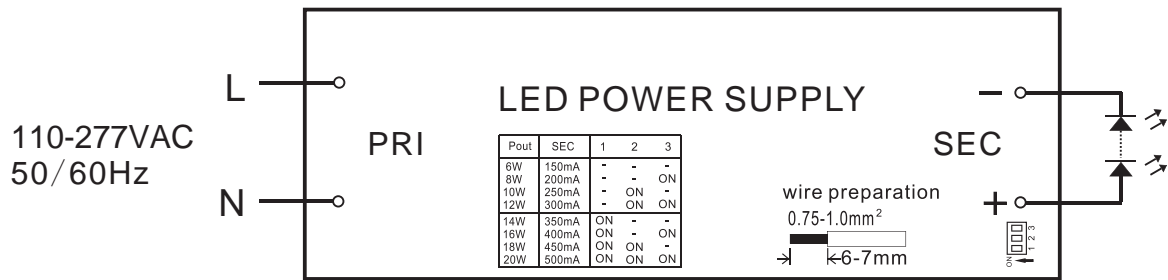

## Specifications:
